BUSINESS ANALYSIS

- 1.1 **Holistic View** - A holistic view in business analysis refers to an all-encompassing approach that considers every aspect of the organization and its environment when analysing problems or proposing solutions . Key Elements – **Organisation , information & Technology , People and Processes**
- 1.2 **Corporate Strategy** - refers to the overarching plan or framework that a business adopts to achieve its long-term objectives.
- 1.3 **Agile software development** approach where the solution is delivered incrementally and requirements are defined in overview initially and evolve during the development process. It came about approach that emerged in the late 1990s following the advent of methods such as rapid application development (RAD), extreme programming (XP) and the Dynamic Systems Development Method (DSDM – now known as the DSDM Agile Project Framework).
- 1.4 Embarking on a poorly determined course of action without thoroughly questioning the underlying assumptions of the decision.
- 1.5 Business Analyst as an Internal Consultant they provide with expert advice throughout the business change lifecycle. The reasons are clear: they can be employed to deal with a specific issue on an ‘as-needed basis’ and they bring a broader business perspective and can provide a dispassionate, objective view of the company. Challenges -they lack of external perspective and accountability, which can limit the objectivity and breadth of solutions compared to external consultants. Benefits – they ensures knowledge retention within the company, fostering long-term capability and they are at lower cost, speed meaning internal consultants do not have to waste time learning about the organization and the retention model within the organization
- 1.6 AID is a framework used in business analysis to ensure that data is effectively utilized to drive meaningful decisions. AID meaning Anomalies, Indicators, Disaggregation.
- Anomalies: data that do not seem to fit well with the others or do not seem quite right typically warrant further notice.
- Indicators: look for the most direct and specific indicators.
- Disaggregation: It can be useful take a step back and to look at the problem itself.
- Inputs need to be evaluated for accuracy: knowing the source of an individual or groups data is important. Reliability: is it real or fake.
